Md. Atik Mouhtasim

CSE Graduate | Software Engineering, AI Systems & Tech Leadership

Banasree, Dhaka, Bangladesh • mdatikmouhtasim@gmail.com • 01719-345888 • atikrahi.dev • helix-77 • mdatik2003118

Summary

CSE graduate from RUET and an active builder who thrives at the intersection of modern software engineering and the AI frontier. Deeply skilled in contemporary stacks (Flutter, React Native, Next.js, Supabase) and proficient with cutting-edge AI agent workflows, I pair full-stack execution with proven leadership as General Secretary of RUET Computing Society. An exceptionally fast learner who adapts instantly to emerging tools, ready to drive innovation in high-impact technology roles.

Education

B.Sc. **Rajshahi University of Engineering & Technology**, B.Sc. in Computer Science and Engineering (CSE) – Rajshahi, Bangladesh — Dec 2021 – Aug 2026
CGPA: 3.53/4.00

HSC **Notre Dame College**, HSC in Science – Dhaka, Bangladesh — Jan 2018 – Jan 2020
GPA: 5.00/5.00

SSC **Thakurgaon Government Boys High School**, SSC in Science – Thakurgaon, Bangladesh — Jan 2010 – Jan 2018
GPA: 5.00/5.00

Experience

RUET Computing Society, General Secretary – Rajshahi, Bangladesh — Nov 2025 – Sept 2026

- Directed executive planning, resource allocation, and operations across university-wide programming and technology events.
- Mobilized and managed responsibilities across executive committees to maintain an active, productive society environment.
- Oversaw project timelines and resolved operational bottlenecks to ensure on-time delivery of technical and administrative milestones.

Texlab IT, Industrial Trainee – Rajshahi, Bangladesh — Mar 2025 – Apr 2025

- Gained hands-on experience in professional software engineering, system workflows, and production best practices.
- Collaborated across teams using GitHub for version control, issue tracking, and Slack for asynchronous communication.
- Strengthened foundations in professional workplace ethics, agile team coordination, and software development standards.

Projects

Asteroid Odyssey — Sept 2025 – Oct 2025

Tech Stack: Next.js, TypeScript, Three.js, D3.js, NASA APIs

- Led a 5-member team as Team Lead and Lead Developer for the NASA Space Apps Challenge 2025.
- Engineered an interactive 3D asteroid-impact simulator visualizing 100+ celestial bodies and modeling mitigation strategies over 50 years.
- Integrated NASA NEO, JPL Small-Body Database, Sentry, and Fireball REST APIs with responsive exploration and threat analysis.

MediTrack — Aug 2026 – Sept 2026

Tech Stack: Flutter, Dart, Firebase, ML Kit, Gemini, SQLite

- Built a bilingual mobile health application for prescription scanning, dosage scheduling, adherence tracking, and refill alerts.
- Architected a hybrid pipeline combining on-device ML Kit OCR with Gemini API extraction, schema validation, and user review.
- Implemented Firebase authentication and persistence, local background notifications, an offline SQLite catalog, and an AI assistant.

WasteGuard May 2025 – present

Tech Stack: React Native (Expo), TypeScript, Supabase, NativeWind

- Developed a cross-platform food-waste reduction app for pantry inventory, expiry alerts, waste analytics, and recipe suggestions.
- Integrated Supabase authentication and cloud database, push notification services, and TanStack Query for server-state caching.

Prayer.time Feb 2026

Tech Stack: React, TypeScript, Vite, Tailwind CSS

- Engineered a privacy-first browser extension for prayer schedules and Ramadan countdowns without continuous GPS tracking.
- Integrated adhan calculation engine, OpenStreetMap Nominatim city search, 11 calculation methods, and per-prayer adjustments.
- Implemented service-worker alarms, cross-tab notifications, and published production extensions for Edge, Firefox, and Chromium.

UniCompanion Jan 2024

Tech Stack: React Native (Expo), Supabase, TypeScript, NativeWind

- Built a cross-platform university management application supporting authenticated workflows for both instructors and students.
- Delivered attendance tracking with CSV/Excel export, course content and assessment management, and in-app messaging.
- Implemented Google OAuth, secure cloud storage, and responsive interface components using NativeWind.

Research

MonoTTC: Object-Level Time-to-Contact Estimation under Limited Supervision Aug 2026

B.Sc. thesis supervised by Farjana Parvin, Department of CSE, RUET

- Engineered a two-stage PyTorch pipeline combining self-supervised ResNet-18 and PoseNet geometry pretraining with ROI adaptation.
- Derived audited metric TTC ground truth from nuScenes 3D tracks, calibrated cameras, and ego poses using a 25% label budget.
- Achieved 0.8667 ± 0.0256 AUROC for critical collision risk classification (TTC ≤ 2.0 s) across 87 scene-disjoint validation splits.

Skills

Programming Languages: Python, JavaScript, TypeScript, Dart, C++, C, SQL, PHP, HTML/CSS

Web & Mobile Development: React, Next.js, React Native (Expo), Flutter, Three.js, Tailwind CSS

Backend & Databases: Supabase (PostgreSQL), Firebase, SQLite, MySQL, Laravel, RESTful APIs

AI & Data Science: PyTorch, torchvision, Scikit-learn, OpenCV, NumPy, SciPy, Seaborn

Tools & Methodologies: Git, GitHub, Linux, Docker, Postman, Vite, Agile/Scrum, Team Leadership

Agents: OpenCode TUI, Codex-CLI, Claude Code, Deepseek-harness, OpenChamber

Certifications

- Industrial Trainee, Texlab IT — Certificate
- EDGE Course (PHP & Laravel), Bangladesh Computer Council and RUET — Certificate
- Supervised Machine Learning: Regression and Classification, Coursera (DeepLearning.AI) — Certificate
- Web Development Bootcamp, Programming Hero — Certificate
